Motor-Rated Precision Thermostats

The T651 thermostat provides direct, accurate line voltage control of inductively-rated heating, ventilating, or cooling equipment used in commercial or industrial environments.

The T451 provides precision line voltage control of motor-rated electric, gas or oil heating equipment.

FEATURES

- Deluxe styling for commercial buildings.
- Industrial grade MICRO SWITCH™ mechanism rated 1/2 hp inductive, 5 kW resistive.
- Vertical mounting on 2” x 4” NEMA-standard single-gang outlet box.
- High-sensitivity, vapor-filled stainless steel dual diaphragm sensing element.
- Engineering plastic base to isolate sensor from switch heat and minimize droop.
- CSA Certified, UL Listed.
- Altitude compensation.
- 44°F (7°C) “frost protection” setting for heating application, independent of calibration or altitude.
- Color-coded leadwire connections.
- Range stops/locking cover security features for public areas.

APPLICATION

The T651 thermostat provides direct, accurate line voltage control of inductively-rated heating, ventilating, or cooling equipment used in commercial or industrial environments.

The T451 provides precision line voltage control of motor-rated electric, gas or oil heating equipment.

Setting and Adjustment ................................................. 4

CL 4-01  © Honeywell Limited/Limitée 2001
Important: The specifications given in this publication do not include normal manufacturing tolerances. Therefore this unit may not exactly match the listed specifications. This product is tested and calibrated under closely controlled conditions, and some minor differences in performance can be expected if these conditions are changed.

Models:
T451A SPST and T451B DPST (with positive off) for heating only.
T651A SPDT for heating/cooling.

Control Range:
44 - 86°F (7 - 28°C) for models T451A, T651A.
50 - 86°F (10 - 28°C) for model T451B.

Sensing Element: Vapor-filled dual diaphragm.

Differential: 2°F (1°C)

Droop: 2°F @ mid load range.

Barometer Sensitivity: 1/8°F/"wc (0.3°C/kPa).

Thermometer: 50 - 90°F (10 - 30°C) in 10°F (5°C) increments.

Electrical Ratings:

White models available.

Mounting:
Mounts directly on vertical, single-gang NEMA Standard (2” x 4”) electrical box.

Wiring Connections:
6” (150 mm) leadwires suitable for connecting to aluminum conductors wiring if used with approved special service CO/ALR solderless wire connectors. Leadwires color-coded red for heating, blue for cooling, black for common.

Approvals:
Canadian Standards Association Certified; File No. LR1322
Performance Certified for electric heating per C273.4A.
UL file E47434.

Accessories:
272804A Range stops and cover locking assembly (included in selected models only).
220213 Wallplate, covers old T451/T651 (1000 series) wall marks.
TG511 Thermostat guard for security and protection.

ORDERING INFORMATION

When purchasing replacement and modernization products from your TRADELINE® wholesaler or your distributor, refer to the TRADELINE catalog or price sheets for complete ordering number, or specify:
1. Model
2. Electrical load(s)
3. Accessories.

If you have additional questions, need further information, or would like to comment on our products or services, please write or phone:
1. Your local Honeywell Home and Building Control Sales Office (check white pages or phone directory).
2. Home and Building Control Customer Satisfaction
   Honeywell Inc., 1885 Douglas Drive North.
   Minneapolis, MN 55422 (612) 951-1000
3. In Canada—Honeywell Limited, 35 Dynamic Drive, Toronto, ON M1V 4Z9, 1-800-405-9835.
International Sales and Service Offices in all principal cities of the world. Manufacturing in Australia, Canada, Finland, France, Germany, Japan, Mexico, Netherlands, Spain, Taiwan, United Kingdom, U.S.A.

2
WHEN INSTALLING THIS PRODUCT:
1. Read these instructions carefully. Failure to follow instructions can damage product or cause a hazardous condition.
2. Check ratings given in instructions and on product to make sure product is suitable for your application.
3. Make sure installer is a trained, experienced service technician.
4. After completing installation, use these instructions to check out product operation.

**WARNING**
This thermostat is a line voltage (120 to 277 Vac) control. Do not install it unless you are completely familiar and competent with home wiring. If improperly handled there can be a risk of 240 volt electric shock hazard which may cause serious injury or death.

**CAUTION**
1. Disconnect power supply before making wiring connections to prevent electrical shock or equipment damage.
2. All wiring must comply with national and local codes and ordinances.
3. When using aluminum conductors, all wiring connections to this thermostat must be made to the factory installed leadwires using approved CO/ALR solderless connectors. A fire hazard may result otherwise.
4. To avoid handling the sensing element, do not remove thermostat cover until wiring is completed.
5. Thermostats are designed for use with appliances having a limit control.

New Installations
1. Install a single-gang electrical box oriented vertically about 4’ to 5’ (1.5 m) above the floor on an inside wall or pillar where the thermostat will be subjected to typical room temperature.
   **NOTE:** To sense temperature properly, the thermostat must be placed away from concealed warm or cold water pipes, air ducts, or drafts from hallways, fireplaces or stairways. Do not place thermostat above convectors or in the flow from supply fans. Ideally, a thermostat should be close to the return air path to effectively measure average room temperature.
2. Wire installation in an approved fashion.
   **NOTE:** T651A and T451A do not feature a Positive Off setting, and may not be used as a disconnect switch.
3. Leave cover on the thermostat while making wiring connections. Use solderless connectors approved for the type, number and gauge of wires being joined.
   Connect as per Fig. 2 for the appropriate application.

### Replacement Applications
1. Disconnect power supply before making wiring connections to prevent electrical shocks or equipment damage. All wiring must comply with applicable codes and standards.
2. Remove the old thermostat from the wall, taking care not to damage the wiring insulation.
3. Check the old insulation for cracks, nicks or fraying. Apply certified electrical tape where necessary to insulate wires, or replace the wires in an approved fashion.
4. Complete installation following steps 3 to 6 in the New Installations section.
Check Out

Turn on power. Raise the temperature setting to energize the heating contact and break the cooling contact. The HVAC equipment should begin heating or stop cooling, as appropriate.

NOTE: For T451A and T651A models only, the thermostat will call for heat (disable cooling) when the setpoint dial is at full counter-clockwise position. This setting is the phase change point of the diaphragm’s vapor fill and is independent of calibration. To de-energize the load(s), turn off power at the circuit breaker panel, or add a separate disconnect switch.

Altitude Compensation

T451, T651 units are calibrated at the factory for accuracy at 500 feet above sea level. No recalibration is needed if the switch operates at the same temperature indicated on the thermometer.

The vapor-filled diaphragm sensor is affected by barometric pressure and altitude. Deviations up to ± 1°F (1/2°C) are within normal operation. Control point drops 2°F every 1000 ft. (1°C/300 m) above sea level. See Fig. 3 for recommended action.

To Recalibrate

1. Remove cover. Set the tab on setpoint knob to the leftmost radial mark visible on top of the triangular arm that holds the dual diaphragm sensor (Fig. 4).
2. Without rotating the knob, remove it from the thermostat by pulling straight out, while holding the base against the wall.
3. Now, rotate the removed setpoint knob clockwise by the amount of temperature error. Each mark on the triangular arm represents 2°F (1°C) of adjustment. Snap the knob back onto the setpoint cam.
4. Install the cover. Wait five minutes to let the thermostat thermally stabilize and re-check calibration. Do not assume a thermostat is out of calibration until it has been installed and allowed to operate for several hours.

Security Features:

Range Stops
1. Set thermostat to desired setpoint. Remove cover.
2. Install plastic dowels supplied (or purchased separately) into minimum and/or maximum range stop holes on inside back of cover (Fig. 5).
3. Re-install cover. Check operation of range stops.

Locking Cover
1. Remove cover by pulling straight out.
2. Insert Tinnerman Speed Nut®s into slots top and bottom of thermostat base.
3. Drive Allen screw into Speed Nut until head is flush with outside edge of thermostat base.
4. Re-install cover. Lock by backing out Allen screw until screw body protrudes through cover hole. To unlock cover, drive Allen screw into thermostat base.
